Quiz: Checked Attributes (Step 4)

Where you pull a Class Macro (117) from your bag of tricks.

The fourth step in your development plan asks you to change the Kernel Method to a *Class Macro (117)* that's available to all classes.

What this means is that instead of an add_checked_attribute method, you want an attr_checked method that the boss can use in a class definition. Also, instead of taking a class and an attribute name, this new method should take only the attribute name, because the class is already available as self.

Bill updates the test case:

ctwc/checked_attributes/macro.rb

```
require 'test/unit'

class Person
  attr_checked :age do |v|
    v >= 18
  end
end

class TestCheckedAttributes < Test::Unit::TestCase
  def setup
    @bob = Person.new
  end

  def test_accepts_valid_values
    @bob.age = 20
    assert_equal 20, @bob.age
  end

  def test_refuses_invalid_values
    assert_raises RuntimeError, 'Invalid attribute' do
      @bob.age = 17
    end
  end
end
```

Can you write the attr_checked method and pass the tests?

Quiz Solution

Think back to the discussion of class definitions in *Class Definitions Demystified, on page 106*. If you want to make attr_checked available to any class definition, you can simply make it an instance method of either Class or Module. Let's go for the first option:
