Monkeypatch

Change the features of an existing class.

```
"abc".reverse # => "cba"

class String
  def reverse
    "override"
  end
end

"abc".reverse # => "override"
```

For more information, see page 16.

Namespace

Define constants within a module to avoid name clashes.

```
module MyNamespace
  class Array
    def to_s
      "my class"
    end
  end
end

Array.new # => []
MyNamespace::Array.new # => my class
```

For more information, see page 23.

Nil Guard

Override a reference to nil with an "or."

```
x = nil
y = x || "a value" # => "a value"
```

For more information, see page 219.
