Refinement

Patch a class until the end of the file, or until the end of the including module.

```
module MyRefinement
  refine String do
    def reverse
      "my reverse"
    end
  end
end

"abc".reverse # => "cba"
using MyRefinement
"abc".reverse # => "my reverse"
```

For more information, see page 36.

Refinement Wrapper

Call an unrefined method from its refinement.

```
module StringRefinement
  refine String do
    def reverse
      "x#{super}x"
    end
  end
end

using StringRefinement
"abc".reverse # => "xcbax"
```

For more information, see page 135.

Sandbox

Execute untrusted code in a safe environment.

```
def sandbox(&code)
  proc {
    $SAFE = 2
    yield
  }.call
end
begin
  sandbox { File.delete 'a_file' }
rescue Exception => ex
  ex   # => #<SecurityError: Insecure operation at level 2>
end
```

For more information, see page 149.
