```
counter           # => 10
3.times { down }
counter           # => 7
```

For more information, see page 84.

Singleton Method

Define a method on a single object.

```
obj = "abc"

class << obj
  def my_singleton_method
    "x"
  end
end

obj.my_singleton_method # => "x"
```

For more information, see page 114.

String of Code

Evaluate a string of Ruby code.

```
my_string_of_code = "1 + 1"
eval(my_string_of_code) # => 2
```

For more information, see page 141.

Symbol To Proc

Convert a symbol to a block that calls a single method.

```
[1, 2, 3, 4].map(&:even?)   # => [false, true, false, true]
```

For more information, see page 225.
