Double, Treble… Trouble

You have to wrap DS into an object that fits the reporting application. This means each Computer must be an object. This object has a single method for each component, returning a string that describes both the component and its price. Remember that price limit set by the purchasing department? Keeping this requirement in mind, you know that if the component costs $100 or more, the string must begin with an asterisk to draw people's attention.

You kick off development by writing the first three methods in the Computer class:

methods/computer/duplicated.rb

```
class Computer
  def initialize(computer_id, data_source)
    @id = computer_id
    @data_source = data_source
  end

  def mouse
    info = @data_source.get_mouse_info(@id)
    price = @data_source.get_mouse_price(@id)
    result = "Mouse: #{info} ($#{price})"
    return "* #{result}" if price >= 100
    result
  end

  def cpu
    info = @data_source.get_cpu_info(@id)
    price = @data_source.get_cpu_price(@id)
    result = "Cpu: #{info} ($#{price})"
    return "* #{result}" if price >= 100
    result
  end

  def keyboard
    info = @data_source.get_keyboard_info(@id)
    price = @data_source.get_keyboard_price(@id)
    result = "Keyboard: #{info} ($#{price})"
    return "* #{result}" if price >= 100
    result
  end

  # ...
end
```

At this point in the development of Computer, you find yourself bogged down in a swampland of repetitive copy and paste. You have a long list of methods
