Methods (51) and *Dynamic Dispatches (49)*, which delegate to the legacy system. The second version of Computer does the same with *Ghost Methods (57)*. Having to pick one of the two versions, you and Bill randomly select the method_missing-based one, send it to the folks in purchasing, and head out for a well-deserved lunch break…and an unexpected quiz.

Quiz: Bug Hunt

Where you discover that bugs in a method_missing can be difficult to squash.

Over lunch, Bill has a quiz for you. "My previous team followed a cruel office ritual," he says. "Every morning, each team member picked a random number. Whoever got the smallest number had to take a trip to the nearby Starbucks and buy coffee for the whole team."

Bill explains that the team even wrote a class that was supposed to provide a random number (and some *Wheel of Fortune*–style suspense) when you called the name of a team member. Here's the class:

methods/roulette_failure.rb

```
class Roulette
  def method_missing(name, *args)
    person = name.to_s.capitalize
    3.times do
      number = rand(10) + 1
      puts "#{number}..."
    end
    "#{person} got a #{number}"
  end
end
```

You can use the Roulette like this:

```
number_of = Roulette.new
puts number_of.bob
puts number_of.frank
```

And here's what the result is supposed to look like:

```
5...
6...
10...
Bob got a 3
7...
4...
3...
Frank got a 10
```
