Red flag signs

These are danger signals to be identified at newborn. Presence of one or more of these sings is an indication for prompt evaluation and treatment.

- Feeding difficulty
- Persistent vomiting
- Fast breathing (more than 60 breaths per minute)
- Hypothermia (temperature less than 35.5°C
- Hyperthermia or Fever,Temperature more than 37.5°C
- Seizures
- Lethargy
- Fatigue yellowish discoloration

DO YOU KNOW?

A newborn usually In India, the newborn death rate is 25.4 in 1000 live births as per 2016 statistics

8.3 Universal immunization programme

Immunization is a mass means of protecting the greatest number of people. It has to be planned according to the needs of the situation and the prevailing health issues. Every country has its own immunization schedule to suit the local needs. Under immunization, immunizing agents such as antisera, live vaccines and inactivated or killed vaccines are administered.

Cold Chain and Equipments

The vaccines should be stored at an appropriate temperature (preferably low) and the temperature should be maintained during its transport from the manufacturing site to the actual vaccination site. This system of storage and transport is known as the **"cold chain".** If the temperature is not maintained, there is a possibility of vaccine failure. It is expected to maintain 6 rights of supply chain. They are as follows:-

- Right vaccine
- Right dose
- Right site
- Right time
- Right condition(temperature)
- Right person

To maintain cold chain, certain equipments are used in Universal Immunization Programme. They are as follows:-

- Walk in freezers
- Walk in coolers
- Deep freezer
- Ice lined refrigerator
- Domestic refrigerator
- Cold boxes
- Vaccine carriers
- Ice pack
