Growth Chart

WHO growth chart

Growth chart is developed by **Prof. David Morley.** It is a visual display of child's growth and development. In growth chart, child' weight is recorded periodically and a curve is drawn. A flat curve indicates that the child's growth is arrested or slowed down. There are reference curves printed in the growth chart. One has to compare the child's growth curve with the reference curve to detect normalcy or any deviation. There are Height for age and Weight for height chart is available. The various types of growth chart available in India are

- WHO growth chart
- Govt. of India Growth chart
- ICDS growth chart

Uses of growth chart

- To ensure normal growth
- To identify any deviation in growth
- To assess the health status
- To teach mother about the importance of proper care
- To motivate the mother to promote normal growth

8.6 Weaning

Weaning is giving family foods in addition to breast milk. Family foods are foods that the rest of the family normally eat, can give babies all the nourishment they need without any additional cost. Weaning is a gradual process by which the infant becomes accustomed to the adult diet. The weaning period is the most crucial period in the child's development. Weaning, if not done properly, lead to diarrhea and malnutrition.
