10.11 Therapeutic Nurse – Patient Relationship

Repeated human contacts are essential to develop trust, love, tenderness concern and acceptable nature. The nurse has to act as a parental role, and accept the client's thoughts, feelings, interest and problems. The nurse–client relationship is the foundation upon which psychiatric nursing is established.

Definition for Relationship

"Relationship is a state of being related or interrelated" -Webster new collegiate dictionary

Social Relationship

To satisfying needs of each other. - Example: work colleagues, friends, functions and parties

Intimate Relationship

Two individuals committed to one another. - Example: partner type and to reduce loneliness

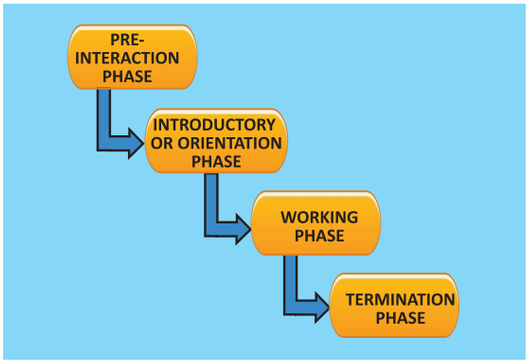

Therapeutic Relationship

Nurse – client or therapist – differs from both social and intimate - client work together towards the goal.

Components of Therapeutic Nurse – Patient Relationship

- Rapport
- Trust, Respect and Genuineness
- Empathy, Sincerity and Concern
- Immediacy
- Communication skills
- Warmth
- Active listener
- Self-discipline

Phase and Tasks

Pre – interaction phase:

Nurse is assigned to take care of client. Plan for first meeting with patient.

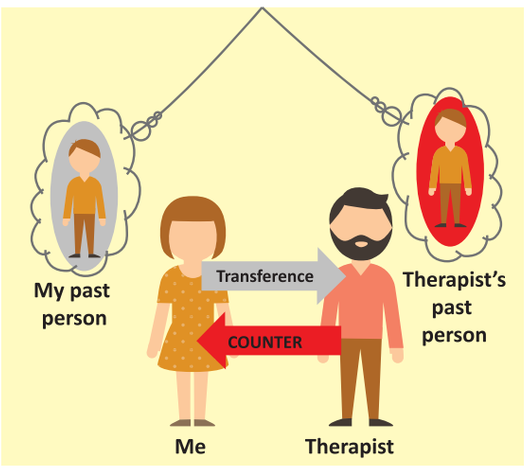

Introductory/ orientation phase: During this phase the nurse and patient meet for first time. Establish rapport, trust and acceptance. Gather data including patient`s feeling, strengths and weakness.

Working phase: Most of work is carried out during this phase.

Termination phase: Patient has achieved the treatment goals

Therapeutic Impasses

For variety of reasons therapeutic relationship is hindered. Therapeutic impasses are blocks in the progress of nurse – patient relationship.

Resistance: Resistance is the patient's avoidance of verbalizing
