Theme of Mental Health Day 10th October 2018 – young people and mental health in a changing world

SUMMARY

Most people with mental illnesses are treated in the community rather than in hospitals, but nurses are needed in both settings. Demand for mental health services has increased significantly in recent years. Around 20% of the world's children and adolescents have mental disorders. Mental and substance use disorder disorders are the leading cause of disability worldwide. War and disasters have a large impact on mental health and psychosocial wellbeing. Mental disorders are important risk factor for other diseases as well as intentional and unintentional injury. Stigma and discrimination against patients and families prevent people from seeking mental health care. Financial resources to increase services are relatively modest. About 800000 people commit suicide every year. Generally there is huge inequity in the distribution of skilled human resource for mental health

GLOSSARY A-Z
