4. **Host:** A person or animal including birds and arthropods that affords subsistence or lodgment to an infectious agent under natural condition.
5. **Communicable diseases:** An illness due to specific infectious agent or its toxic products capable of being directly or indirectly transmitted from man to man, animal to animal or from the environment to man or animal.
6. **Epidemic:** The unusual occurrence or sudden outbreak of disease in a community or region.
7. **Endemic:** It refers to the constant presence of a disease or infections agent within a given geographic area or population group.
8. **Sporadic:** The word sporadic means scattered about. The diseases are so few and separated widely in space.
9. **Pandemic:** An epidemic usually affecting a large proportion of the population, occurring over a wide geographic area such as a section of a nation, the entire nation, a continent or world (eg.) influenza pandemic
10. **Zoonosis:** An infection transmissible under natural conditions from vertebrate animals to man. Eg. Rabies, plague
11. **Eradication:** Termination of all transmission of infection through surveillance.

Carriers

A carrier is defined as "an infected person or animal that harbours a specific infectious agent in the absence of clinical manifestation and serves as a potential source of infection to others.

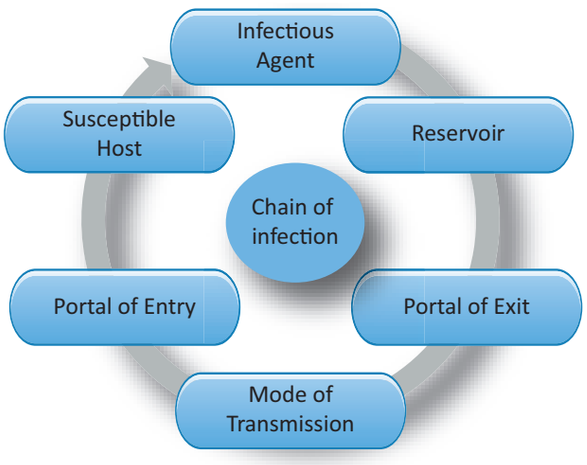

DO YOU KNOW?

National Centre for Disease Control (NCDC) (previously known as National Institute of Communicable Diseases) is an institute under the Indian Directorate General of Health Services, Ministry of Health and Family Welfare. which was established in July 1963 .

Definition

Communicable Disease - "An illness due to a specific infectious agent or its toxic products capable of being directly or indirectly transmitted from man to man, animal to animal, or from the environment (through air, dust, soil, water, food, etc.) to man or animal.

Chain of Infection

11.2 Source of Reservoir

Definition

Infectious agent: An organism that is capable of producing infection or infectious disease.

A **reservoir** is defined as " living or nonliving material in or on which an infectious agent multiplies or develops and is dependent for its survival in nature.
