8. Provide proper skin and mouth care.

Complications

1. Intestinal bleeding
2. Fresh blood in the motion
3. Intestinal perforation (occur in the third week).

1. Antonius Musa, a Roman physician who achieved fame by treating the Emperor Augustus 2,000 year ago, with cold baths when he fell ill with typhoid.
2. Thomas Willis who is credited with the first description of typhoid fever in 1659.
3. French physician Pierre Charles Alexander Louis first proposed the name “typhoid"

Cholera

Cholera is an acute diarrhoeal disease caused by V . Cholera (Classical El. Tor)

Causative organism - Vibrio Cholera

Mode of transmission

Transmission occurs from man to man via

a. Faecal contaminated water

b. Contaminated food and water

c. Direct contact

Incubation period - Few hours to 5 days

Clinical manifestations

Onset is abrupt with profuse, painless, watery diarrhea known as rice water stool.

- Muscular cramps
- In Children – Fever, convulsions or coma, loss of muscular tone.
- Vomiting
- Sunken Eyes
- Hallow checks
- Skin pale
- Husky voice
- Extremities are cold.
- Pulse rapid and feable.
- Blood pressure is low
- Shallow and quick respiration

Diagnosis

Stool test

Complications

1. Shock,
2. Severe dehydration,
3. Low blood sugar in children which can cause seizures, unconsciousness, and even death
4. hypokalemia(low potassium level)

Control measure

1. **Verification of the diagnosis** : All cases of diarrhea should be investigated .
2. **Notification** : Cholera is a notifiable disease locally, nationally and
