are at an increased risk of developing meningococcal illness.

d. **Mass chemoprophylaxis:** Mass medication of the total population some of which arenot infected. Mass chemoprophylaxis be restricted and closely and medically supervised

e. **Communities :** Mass treatment causes an immediate drop in the maintenance rate of meningitis and in the proportion carriers.

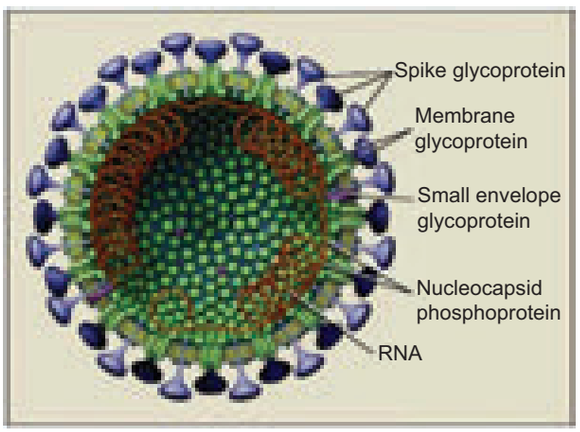

f. **Environmental measures :** Improved housing and prevention of over-crowding are longterm measures.

Acute Respiratory Infections

Definition

Acute respiratory infections may cause inflammation of the respiratory tract anywhere from nose to alveoli.

Schematic drawing of SARS coronavirus

Causative organism

- SARS Corona virus

Mode of transmission - air-born route.

Incubation period - 18-72 hours

Clinical manifestations

Running nose, cough, sore throat, breathing difficult and ear problems. Fever is common in acute respiratory problem, most children with these infections have only mild infection such as cold or cough.

Complication – Pneumonia

The high mortality and morbidity rate attribute to acute respiratory infections.

HIB vaccine

Hemophiles influenza type B, HIB is an important cause of pneumonia and meningitis among children in developing world.

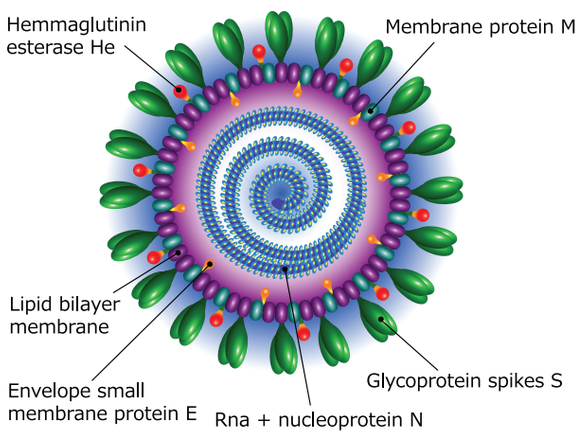

Treatment

- Antiboitic

Severe Acute Respiratory Syndrome

Corona Virus

Baltimore Group IV ((+)ssRNA)

Definition

Severe acute respiratory syndrome is a communicable viral disease

Causative organism

Corona virus

Mode of transmission

1. Close contact with infected person
2. Contaminated air and surfaces
3. If a person touches a contaminate surface and then touches their eye, mouth or nose

Incubation period - 2 to 7 days
