3. Sweating stage - Profuse sweating, temperature normal, Enlargement of spleen and secondary anaemia.

Diagnosis

Blood smear test

Treatment

Antimalarial drugs

Lymphatic Filariasis

Definition

Lymphatic filariasis commonly known as elephantiasis, is a mosquito borne disease caused by the filarial parasites.

Causative organism - Wucheriria bronchofti, Brugia malayi

Mode of transmission - It is transmitted by the bite of culex mosquitoes.

Incubation period - 5 to 10 months

Clinical manifestations

- Fever
- Lymphangitis
- Elephantiasis evident in legs and arm

Control measures - Vector control

- Anti larval measures
- Chemical control – mosquito larvicidal
- Removing the pistia plant from all water collections and convert the ponds to fish or lotus culture.
- **Environmental measures :** Larvicidal operations are complemented by minor engineering operations such as filling up of ditches and pools, drainage of stagnant water,adequate maintenance of septic tanks and soakage pits etc.,

Diagnosis test

Blood smear by microscopic examinations

Treatment

Chemotheraphy – Mass drug administration (MDA) regimens.

Chikungunya Fever

A dengue like disease caused by a group A virus.

Causative organism

Aedes aegypt, Ades albopictus female mosquitoes

Mode of transmission –Transmitted from human to human by the bites of infected female mosquitoes.

Incubation period - 4 to 7 days

Clinical manifestations

- High fever with chills
- Severe articular pains in the limbs and spinal column.
- Arthralagia
- Anorexia
- Conjunctivitis
- Coffee-coloured vomiting
- Epistaxis
- Arthropathy : pain, swelling and stiffness, especially of the meta carpophalanges wrist Elbow, shoulder, knee, ankle and metatarsal joints.

Diagnosis

Serological tests: ELISA (Enzyme Linked Immuno Sorbent Assays)

Complications

1. Dementia
2. Cerebral problems
3. Kidney disorders
4. Paralysis
