Control measures

- The Aedes aegypti mosquito breeds in clean water.
- All water containers should be covered, to eliminate mosquito from the breeding places.
- Abate is increasingly used as a larvicide.
- Aerosol spray of ultra low volume (ULV) quantities of malathion or sumithion (250 ml / hectare) has been found to be effective in interrupting transmission and stopping
- Epidemics of dengue haemorrhagic fever.

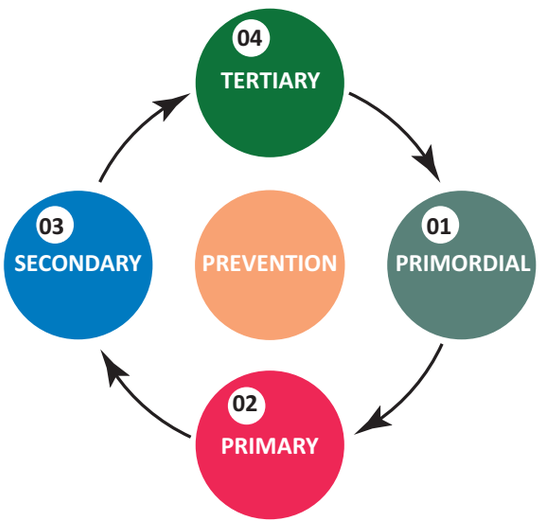

Treatment

- Analgesics
- Anti – pyretics
- Fluids

Prevention of communicable diseases

Communicable diseases can be prevented by appropriate preventive measures which include:

- Good site planning
- Provision of basic clinical services
- Provision of appropriate shelter
- Clean water supply
- Sanitation
- Mass vaccination against specific diseases
- Regular and sufficient food supply
- Control of vectors
- Health education specific protection. Eg. Immunization chemoprophylaxis

11.9 Prevention Of Communicable Diseases

PRIMORDIAL – PREVENTION : It is a new concept, receiving special attention in the prevention of chronic diseases. This is primary prevention in its purest sense, that is prevention of the emergence or development of risk factors in countries or population. An groups in which they have not yet appeared eg many adult health problems.

Primary Prevention

- Increasing the resistance of the host
- Inactivating the agent
- Interrupt the chain of infection
- Restricting spread of infection
- Health education
- Specific protection (eg) Immunization, Chemoprophylaxis.

Secondary Prevention

- Activities targeted at detecting disease at earliest possible. Examples case finding, health screening, health education

Tertiary Prevention

- Limits the progression of disability
- Treatment of symptoms and rehabilitation vary with each specific disease

Surveillance

- Surveillance is the ongoing systematic collection, analysis and interpretation of data in order to plan, implement and evaluate public health intervention.

Outbreak Control

- An outbreak is occurrence of a number of cases of a disease that is unusually large or unexpected for a given place and time. Early detection and control of the disease is advisable.
