CHAPTER 13

Introduction to Nursing Research

முடிவும் இடையூறும் முற்றியாங்கு எய்தும்
படுபயனும் பார்த்துச் செயல்.

Accomplishment the hindrances large profits won by effort; These compare, then let the work to be done.

Learning Objectives

At the end of this chapter, the students will be able to:

- define nursing research
- gain knowledge about importance of nursing research
- list out the steps in nursing research
- define the descriptive statistics
- define the inferential statistics
- explain about the current computer applications in nursing research

PS8UB9

Introduction

The meaning of the word 'research' is to find correct answers to questions raised or to find solutions to problems identified.

In the past and for many years, people based their beliefs on presumptions or interpretations of things that they saw or observed in and around them and then came to various conclusions. These conclusions were not tested to find out whether they were correct (valid) or not.

For example, in ancient days, in Egypt, every year Nile river flooded and it left behind very rich soil along the riverbanks which helped people to grow crops for the year. But along with the rich soil, a large number of frogs also appeared. Therefore, the Egyptian concluded that frogs came from muddy soil. Here we can say that scientific research was not used because the people never gave a thought if there can be any other reason for the large number of frogs living in the floods. Later problems were scientifically analysed based on data this is called scientific enquiry.
