the questions that are asked. It is based on the information collected and study interpretation.

There are three types of Assumptions.

i) Universal Assumptions – Beliefs that are assumed to be true by a large percentage of Society.

ii) Assumptions based on theory or research findings- Previous research studies which form the basis for assumptions in the present study.

iii) Assumptions that are necessary to carryout the study – Need to conduct a research study.

5. **Formulating the Hypothesis or Research Question**: Hypothesis predicts the relationship between two or more characters. According to the asked questions in the problem statement. The hypothesis furnishes the answer to it. It is testable or verifiable by the information gathered. The research is guided by research questions that are further elaboration of the problem statement.
6. **Selecting the research Design :** It is the plan for how the study will be conducted as well as concerned with the type of information that will be collected.
7. **Identifying the population/sample**: The population means the complete set of individuals or objects that posses some common characteristics of interest to the researcher. The subgroup of populations is called study sample.
8. **Conducting a pilot study** : A pilot study is a miniature trial version of the planned study. It reveals the feasibility of the study and helps to test the instruments. It also plays a role in gaining experience with the study process and it indicates that where the revision should be made.
9. **Collecting Data** : It is the process of collection or gathering of pieces of information's facts that are related to the study.
10. **Organizing the data for Analysis** : It is the grouping of information's for tabulation and evaluation purpose. A statistician should be consulted in the early and phase of the research process. The statistician can help to follow the appropriate analytical method.
11. **Interpreting the findings** : After the data are analyzed the finding of the result are compared with those of previous studies for further recommendation

13.4 Related Websites/Software Used In Nursing Research

S. NO	USES OF COMPUTER IN	RELATED WEBSITE AND SOFTWARE
1.	Identification and formulation of problem statement	PUBMED
2.	Review of literature	MEDLINE, Open Access Journals
3.	Framing of conceptual framework	Visual display
4.	Planning of research design	Word processing, data base
5.	Preparation of sampling process	Word processing
6.	Data collection procedure	Video recorded, flash based narrator, Led interview
7.	Analysis and statistical calculation	SPSS, ANOVA
8.	Presentation of research	Open source software
9.	Budget mobility	Microsoft office, EXCEL
10.	Reference sources	Vancouver, APA, style
