## SUMMARY

- **Identifying a problem:** Any problem or question which we want to clarify, instead of assuming the answers or solutions
- **Searching professional literature for possible solutions:** Looking up literature so as to know what has been written or studied about the same problem earlier.
- **Prepare a research question in an answerable or testable format:** Writing the questions related to the study going to be conducted
- **Considering a solution to solve the problem:** In problem – solving methods, one should put down possible ways of solving the problem
- **Making a research hypothesis that can be tested:** Writing a statement making a relationship between various factors
- **Conducting the study or research (Pilot Study):** Conducting the study using the selected tool with minimum participants.
- **Analysing the result:** Making sense of all the data collected by grouping and analyzing during the research
- **Determining if the scientific hypothesis is correct:** Checking back to see if the hypothesis or factors have any relationship with each other or not
- **Applying the variant:** Making a final judgement based on the results and preparing recomadations

## GLOSSARY A-Z

| | | |
|---|---|---|
| **Conceptual** | – | Strategy for expressing a framework of a study that diagrammatically shows the interrelationships of concepts and statements |
| **Conclusion** | – | Synthesis and clarifications of the meanings of study findings |
| **Data** | – | Informations that are collected during a study |
| **Data analysis** | – | Technique used to reduce, organize and give meaning to data |
| **Data collection** | – | Systematic gathering of Information |
| **Descriptive statistics** | – | Statistics that allow the researcher to organize the data in ways that give meaning and facilitate insight |
| **Design** | – | Blue print for conducting a study |
| **Findings** | – | The translated and interpreted results from a study |
| **Hypothesis** | – | Formal statement of expected relationship between two or more variables in a specified population |
| **Variables** | – | Characteristics of person to be measured |
| **Population** | – | The individuals or objects having some common characteristics. |
| **Theory** | – | Integrated set of defined concepts used to describe, explain and predict the relationship between study outcome and the view of the nursing theorist. |
| **Intervention** | – | Treatment or independent factor while conducting the study. |
