RYLE'S TUBE FEEDING

Meaning

Ryle's tube feeding is a very useful method of ensuring adequate intake of fluid and nutrients through a tube in to the intestinal tract, in patients who are unable to use the oral route for variety of reasons.

Purposes

- To provide adequate nutrition
- To give large amounts of fluid for therapeutic purpose
- To provide alternative manner to some clients who has potential or difficulties

Equipments Required

- Disposable gloves (1)
- Feeding solution as prescribed
- Feeding bag with tubing (1)
- Water in jug
- Large catheter tip syringe (30 ml or larger than it) 1
- Measuring cup (1)
- Clamp if available (1)
- Paper towel as required
- Doctor's Prescription
- Stethoscope

S No	Action	Rational
1	Assemble all equipments and supplies after checking the Dr.'s Prescription for tube feeding	Organization facilitates accurate skill Performance Checking the prescription confirms the type of feeding solution, route, and prescribed delivery time.
2	Prepare formula: In the type of can: Shake the can thoroughly. Check expiration date In the type of powder Mix according to the instructions on the package, prepare enough for 24 hours only and refrigerate unused formula. Label and date the container. Allow formula to reach room temperature before using. In the type of liquid which prepare by hospital or family at a time Make formula at a time and allow formula to reach room temperature before using.	Feeding solution may settle and requires mixing before administration. Out-dated formula may be contaminated or have lessened nutritional value. Formula loses its nutritional value and can harbour microorganisms if kept over 24 hours. Cold formula cause abdominal discomfort or sometimes diarrhea.
3	Explain the procedure to the diet	Providing explanation fosters client's cooperation and understanding
