r) Mentally challenged conditions
s) Epilepsy / fits

The role of nurses at home in generally on the aspects of

a) Activity / rest
b) Circulation
c) Elimination
d) Food and fluids
e) Hygiene
f) Monitoring / surveillance
g) Safety
h) Ventilation

Activity and rest: In activity and rest the nurses role is on

- Active and passive range of motion exercises
- Body mechanics
- Low back pain exercises
- Post Mastectomy exercises

Active and passive range of motion exercises

They are those that take the body joints through their extent of movement. Their purpose is to maintain joint function and muscle tone. Ranges of motion exercise are categorized according to the independence of performance.

Active range of motion exercise:

Those performed independently by client.

Assisted Range of motion exercise:

Those the client can partially perform but requires some assistance for the whole performance.

Passive range of motion exercise:

Those exercise the client is unable to perform and that requires total assistance from another person.

The nurse role is to teach the client and family to

a) Perform each exercise accurately
b) Perform the exercise consistently
c) Integrate the exercise in other daily activities such as bathing. Watching television, or playing games.

Elimination:
