Nursing management

- Maintenance of personal hygiene
- Isolation - separate clothing and toiletries.
- Necessary care to be given to the family members
- Topical treatment must be applied to the entire skin surface.
- After completion of treatment patients should use fresh, clean bedding and clothing.
- Other family members and Close personal contacts should be treated at the same time.
- Teach them to wash all linens, towels, and clothing used by the patient during the 2 days before treatment in hot water and dry them in sunlight.

Psoriasis

Psoriasis is one of the commonest skin disorders. Psoriasis is a chronic autoimmune skin disease. In auto immune disease immune system of our body attacks our own tissues, which leads to the rapid build-up of skin cells and causes scaling on the skin's surface. Psoriasis may begin at any age, but most diagnoses occur in adulthood. The average age of onset is between 15 to 35 years old. According to the World Health Organization (WHO) some studies estimate that about 75 percent of psoriasis cases are diagnosed before age 46.

Definition

Psoriasis is an inflammatory and proliferative immune mediates disease of the skin that results in a rapid turnover of the skin cells.

Types

- Plaque type Psoriasis
- Guttate Psoriasis, Pustular Psoriasis
- Inverse Psoriasis
- Erythrodermic Psoriasis
- Nail Psoriasis
- Psoriasis of the Scalp
- Palmar-Plantar Psoriasis
- Psoriatic Arthritis
- Systemic diseases in Psoriasis

Causes
