1 HUMAN ANATOMY AND PHYSIOLOGY

நோய்நாடி நோய்முதல் நாடி அதுதணிக்கும்
வாய்நாடி வாய்ப்பச் செயல்.

Let the physician enquire into the (nature of the) disease, its cause and its method of cure and treat it faithfully according to (medical rule).

Learning Objectives

At the end of the chapter students will be able to;

- understand the anatomy and physiology of various organs
- gain knowledge about sense organs and their function
- understand the skeletal and muscular system
- follow the health and hygiene of reproductive system

WZUXQI

Introduction

Anatomy and physiology are the branches of biology. Many of the concepts in physiology, also incorporate other basic sciences including chemistry and physics.

Anatomy is the study of the structure of living organisms. The form of an organism is the structure of its body and body parts.

Physiology is the study of the function of living organism. The function of the body and its parts determines how an organism carries out its daily activities.

1.1 Integumentary System

It comprises the skin and its appendages which protects the body from various kinds of damages such as loss of water or damages from outside.

DO YOU KNOW?

The skin is the largest organ that covers the entire body.

The integumentary system consists of the

- Skin
- Hair
- Finger and toe nails
- Sebaceous glands
- Sweat glands
