- Serum laboratory studies or lumbar puncture–to evaluate for infectious, hormonal, or metabolic etiology.

Management

- Pharmacotherapy - Anti-Epileptic Drugs selected according to seizure type.
- Surgery–operations (temporal lobectomy, extratemporal resection, corpus callosotomy, hemispherectomy)
- Vagal nerve stimulation anterior thalamic stimulation
- A ketogenic diet

Nursing Management

- Establish airway
- Maintain blood pressure (BP).
- Monitor vital and neurologic signs on a continuous basis.
- Administer oxygen–there is some respiratory depression associated with each seizure,
- Establish I.V. lines, and keep open for blood sampling, drug administration, and infusion of fluids.
- Administer I.V. anticonvulsant *slowly* to ensure effective brain tissue and serum concentrations.
- Monitor the patient continuously; depression of respiration and BP induced by drug therapy .
- Determine (from family member) if there is a history of epilepsy, alcohol/drug use, trauma, recent infection.
- Counsel patients with uncontrolled seizures about driving or operating dangerous equipment.
- Assess home environment for safety hazards in case the patient falls, such as crowded furniture arrangement, sharp edges on tables, glass. Soft flooring and furniture and padded surfaces may be necessary.
- Support patient in discussion about seizures with employer, school, and so forth.

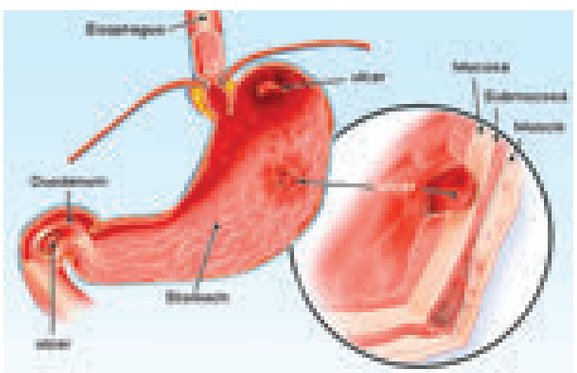

Complications

- Difficulty learning.
- Aspiration pneumonia
- Injuries from falls, bumps, and self-inflicted bites.

Self-care at home for epilepsy

- Loosen any tight neckwear.
- Turn the person on his or her side.
- Do not hold the person down or restrain the person.
- Do not place anything in the mouth or try to pry the teeth apart. The person is not in danger of swallowing his or her tongue.
- Observe seizure characteristics – length, type of movements, and direction of head or eye turning. These characteristics may help the doctor diagnose the type of seizure.

2.10 Gastric Ulcer

Gastric ulcers are open sores within the lining of the stomach. Stomach ulcers (gastric ulcers) are a type of peptic ulcer, meaning having to do with acid. Because of the amount of acid present in the stomach and the damage that can occur, they are often extremely painful. Although gastric ulcers can occur
