- Facilitate improved coping.
- Enhance client knowledge about hyperthyrodism

Dietary management

- Iodized salt.
- Vitamins or supplements that contain iodine
- Milk or other dairy products including ice cream, cheese, yogurt and butter.
- Seafood including fish, shellfish.
- Herbal supplements.

Foods to be included

- Non-iodized salt.
- Coffee or tea (without milk or dairy- or soy-based creamers)
- Egg whites.
- Fresh or canned fruit.
- Unsalted nuts and nut butters.
- Breads made without salt, dairy, and eggs.
- Popcorn with non-iodized salt.
- Oats.

Women are 4-7 times more likely to have THYROID disorders than men

Complication

- Arrhythmia
- Congestive heart failure.
- Hypertension.
- Sudden cardiac arrest.

2.22 Fibrosis

Fibrosis, or scarring, is a condition where the wound healing is exaggerated. It is progressive in nature eventually leading to organ malfunction and death. Fibrosis affects nearly every tissue in the body. The growth of new capillaries into the inert material (exudates or thrombus), the migration of macrophages and the proliferation of fibroblasts resulting in fibrosis.

Definition

Pathological accumulation of extracellular matrix (ECM) proteins resulting in fibrosis or scarring and thickening of the affected tissue.

Causes

- Unknown
- Radiation
- Cigarette smoke
- Chemicals
- Chronic alcoholism
- Occupational hazards (silicosis, asbestosis)
- Chronic infection
- Fatty liver disease
- Hepatitis B or hepatitis C.

Types

- **Lung fibrosis or pulmonary fibrosis** - occurs as a result of long standing infections such as tuberculosis or pneumonia.
- **Cirrhosis of liver** refers to the scar tissue and nodules that replace liver tissue that disrupt liver function.
- **Heart fibrosis** - areas of the heart that have become damaged due to myocardial infarction.
- **Mediastinal fibrosis** - calcified fibrosis of the lymph nodes, which can block respiratory channels and blood vessels.
- **Retroperitoneal cavity fibrosis** - fibrosis of the soft tissue in the retro-peritoneum
- **Myelofibrosis** - scarring of the bone marrow that prevents the normal production of blood cells.
