Lifestyle changes:

Exercise to strengthen the pelvic floor muscles

- Reduce the intake of fluids in the night before going to bed
- Avoid caffeine and alcohol

Complications

- Urinary tract infection(UTI)
- Renal stone
- Bladder outlet obstruction
- Renal failure.

BPH is not cancer, and it does not raise the risk for prostate cancer

2.27 Hydrocele

The testes, or testicles, are the two male reproductive glands that produce sperm and the male hormone testosterone. They are located in the scrotum, which is a pouch located behind the penis. Hydroceles can occur on either side of the scrotum or, in rarer cases, on both sides.

Definition

Hydrocele is a collection of excessive fluid in the tunica vaginal sac.

Types

1. **Vaginal Hydrocele** occurs when hydrocele sac in patient only in the scrotum.
2. **Infantile Hydrocele** The sac from the scrotum in patient upto the deep ingunial rings
3. **True congenital Hydrocele** The scrotal sac communicates with peritoneal cavity.
4. **Hydrocele of canal of Nuck:** It presents as a smelling in the inguinal region in female.

Risk factors

- Injury or inflammation of the scrotum

Causes

- Excessive production of fluid within the sac
- Defective absorption of fluid
- Defective lymphatic drainage of scrotal structures as in case of elephantiasis
- by connection with a hernia of the peritoneal cavity in the congenital variety, which presents as hydrocele of the cord

Symptoms

- Soft, Cystic, Not reducible, Scrotal swelling
- Scrotal pain
- Redness of the scrotum
- Heaviness
- Fullness
- Fluid accumulation with translumination
- Dragging sensation
- Fever
- Chills
- Nausea
- Vomiting

Diagnosis

- History.
- Physical examination
- Ultrasound.
- Blood and urine tests to check for underlying infection.

Management

- **Lord/s Plication** is indicated in small hydrocoeles. The sac is opened and the cut edge of the sac is plicated to tunica albuginea.
- **Partical excision and eversion of the sac:** Jaboula's operation
- Aspiration-is a temporary method.
