partner countries by going the extra mile and delivering life-saving medicines, medical equipment and vaccines—much of which were given out as grants. In addition, we also sent out four medical missions to Kuwait, the Maldives, Mauritius and Comoros, establishing our credentials as not only a reliable pharmacy of the world but also as a premier health security responder for our allies. While it may be difficult to accurately say how the world will emerge on the other side of the pandemic, we can be sure that for a while, it will be in a period of uncertainty and transition. Who will emerge out of the pandemic with what extent of damage is impossible to predict. Also difficult to predict is which country will reinvent itself and which ones wouldn't be able to do so. It may take several years post the pandemic for all of these dynamics to emerge as a clear picture, after which forces in globalization and multilateral relations will likely shift like pieces of a Rubik's cube. In such a case, the best way forward for us would be to look inwards and work on clearly identifying our own preferences and hopes, set clear priorities and find workable solutions—become fully atmanirbhar. If we are able to overcome the needs and desires of 1.3 billion of us, it would only be a matter of time that the world begins to effectively utilize our worth and see clearly what we bring to the table. The prime minister often says that Indians have dared to dream, '*ekkeesvi sadi Bharat ki hi hogi'* (that the twenty-first century will belong to India). With the path we are on now, this dream may truly become a reality that forthcoming generations and perhaps even ours may be able to experience.
