Ancient Egypt

The Ancient Egyptians were located in Northeastern Africa and concentrated along the banks of the river Nile. They kept their society and culture intact for over a thousand years because they used the River Nile, the Mediterranean, and the Red Sea as borders to keep foreigners out. The first inhabitants around the River Nile were Stone-Age men who were hunter-gatherers and found this particular area rich in wildlife. Due to significant changes in climate, these nomads began to settle in as farming communities.

The most important part of Ancient Egypt was its use of the River Nile. The Nile not only provided communication and a route for trading but also kept the land around it extremely fertile. Thus, it became the perfect place for growing different kinds of crops and for building houses. The Nile River is the largest river in Africa and one of the largest rivers in the world. Its origin can be found at the joining of the three rivers that flow from Uganda, Sudan, and Ethiopia. The three rivers meet in southern Egypt and form the Nile. The Nile then stretches across the whole country until the northern border where it joins with the Mediterranean Sea.

Therefore, Egypt’s inhabitants were able to develop into communities because of the existence of this river. Ancient Egyptians had settled on the rich ground along the banks of the Nile to utilize it as a water source in the harsh desert environment in northern Africa. The Egyptian territory was split into two regions: the flat flood plains in the north by the sea and the narrow river valleys in the south. Along with the Red Sea, the Nile enabled the Ancient Egyptians to control both western and eastern trade.

The river also provided these early inhabitants with clay, which they sundried in a brick form to construct their buildings. This kind of block lasted a long time because the external surface was made from hard stone and protected them from the winds and the sun. Egypt also had a wide variety of rocks that facilitated the development of grand architecture made from a combination of clay bricks and stone. Egypt only experienced the
