

Vinoba Bhave

Efforts like *Bhoodan* started by Vinoba Bhave to persuade large landowners to surrender their surplus land voluntarily attracted much public attention.

### (d) Overall Appraisal

Land reform legislation has overall not been a great success. In economic terms, the dream of an agricultural sector prospering under peasant cultivators with secure ownership rights has remained just that – a dream – and there was no visible improvement in efficiency. In more recent years, when agriculture has grown due to technological progress, a more efficient land market is seen to be operating which is more conducive for long term growth.

In terms of social justice, the abolition of the semi-feudal system of zamindari has been effective. The land reform measures have also made the peasants more politically aware of their rights and empowered them.

## 9.2 Development of Agriculture

### (a) Green Revolution

By the middle of the 1960s the scenario with regard to food production was very grim. The country was incurring enormous expenditure on importing food. Land reforms had made no impact on agricultural production. The government therefore turned to technological alternatives to develop agriculture. High Yielding Variety (HYV) of seeds of wheat and rice was adopted in 1965 in select areas well endowed with irrigation.

Unlike traditional agriculture, cultivation of HYV seeds required a lot of water and use of tractors, chemical fertilizers and pesticides. The success of the initial experimental projects led to the large-scale adoption of HYV seeds

Green Revolution in India

across the country. This is generally referred to as the Green Revolution. This also created an enormous demand for chemical fertilizers and pesticides, and these industries grew as well.

Finally, within twenty years, India achieved self-sufficiency in food production. Total rice production increased from 35 million tonnes in 1960–61 to 104 million tonnes in 2011–12. The increase in wheat production was even more impressive, from 11 million tonnes to 94 million tonnes during the same period. Productivity also increased. A large reserve stock of food grain was built up by the government through buying the surplus food grain from the farmers and storing this in warehouses of the Food Corporation of India (FCI). The stored food grains were made available under the Public Distribution System (PDS) and to ensure food security for the people.

Another positive feature has been the sustained increase in the production of milk and eggs. Due to this, the food basket of all income groups became more diversified.

While the Green Revolution has been very successful in terms of increasing food production in India, it has also had some negative outcomes. First of all, it increased the disparities between the well-endowed and the less well-endowed regions. Over the decades, there has been a tendency among farmers to use chemical fertilizers and pesticides in excessive quantities resulting in environmental problems. There is now a move to go back to organic farming in many parts of the country. The
