Rails app. This installation gives you several things:

- A call to the new helper <%= javascript_importmap_tags %> in the application layout file
- An empty startup file at app/javascript/application.js
- A directory (vendor/javascript) to place vendored versions of imported third-party modules
- A configuration file at config/importmap.rb. The configuration file contains all the modules that are going in the import maps starting with pin "application", preload: true, which I'll talk about in a moment.
- A binary file (bin/importmap) to run the CLI that helps manage the importmap-rails manifest
- When you install Stimulus and Turbo, you also get the Stimulus and Turbo libraries and the Stimulus controller directory added to the configuration file.

Then, when Rails renders the header it sends something like the screenshot shown down to the browser.

```
    <script type="importmap" data-turbo-track="reload">{
