With the app set up and the main branch running, run it using the command bin/dev—this command will start the Rails server, but also bundle the JavaScript and CSS, such as it is at this point. You should hit http://localhost:3000 where you'll see the schedule page with a bunch of dates at the top, a search field in the middle, and a lot of schedule information at the bottom, with each scheduled day having a kind of ugly button labeled "Hide." If you click any of the concert names, you'll be taken to a concert page that shows basic data as well as a grid of sets for the show. Neither of these pages has any interactivity at the moment.

From the login link, you can log in with username "areader@example.com" and password "awesome." Doing so will take you back to the schedule page, with an additional option to make each concert a favorite.

The schedule page should look something like this (your randomized data will be different):

If you want to keep following along, each separate step in the application is a different directory in the sample code download, and you can move from one to another to see the entire application at different steps.
