the sample code for chapter_15/02 will show them all.

Then we check that individual tickets, group tickets, and the Clear All button work, using a combination of select and click events: the have.attr and have.text assertions.

We're not testing the return back to the server; however, we could, by refreshing the page and showing that sales persist. We're also not testing the ActionCable activity of what happens if another browser causes an ActionCable message to be sent. Cypress doesn't let you test multiple browsers at once, so I think the ActionCable would have to be tested by forcing the seat change action to happen from a spec.
