while and until Modifiers

expression while *boolean-expression*
expression until *boolean-expression*

If *expression* is anything other than a begin/end block, executes *expression* zero or more times while *boolean-expression* is true (for while) or false (for until).

If *expression* is a begin/end block, the block will always be executed at least one time.

break, redo, and next

break, redo, and next alter the normal flow through a while, until, for, or iterator-controlled loop.The retry keyword is not permitted in a loop context.

The break keyword terminates the immediately enclosing loop—control resumes at the statement following the block. redo repeats the loop from the start but without reevaluating the condition or fetching the next element (in an iterator). The next keyword skips to the end of the loop, effectively starting the next iteration.

break and next may optionally take one or more arguments. If used within a block, the given argument(s) are returned as the value of the yield. If used within a while, until, or for loop, the value given to break is returned as the value of the statement. If break is never called or if it is called with no value, the loop returns nil.

```
match = for line in ARGF.readlines
  next if line =~ /^#/
  break line if line =~ /ruby/
end
```
