- **Smoothing**

Smoothing is the process of finishing process of the ice sculpture. Smoothing is used in order to make clear and fastidious lines. Prepare hot water and keep it in a vessel. Dip a metal ruler in this hot water and gently pertain it to the ice by using this ruler to smooth it.

iii) How to Maintain Ice Sculpture

A temperature-controlled room will be the safest place for the ice sculpture. The temperature should not exceed more than 70 degrees Fahrenheit for a 136 Kg sculpture. Do not place the sculpture outdoors under the direct sunlight especially during warm and temperate climate.

An average lifespan of 136 Kg sculpture is six hours in a temperature controlled room. Make the sculpture bigger and thicker by using more ice to increase the total weight. An increase in the weight extends the life of the object.

iv) Equipment required for ice carving

- **Bit Sharpening**
- **Chisel**
- **Ice Chipper**

Plate 4.56 Bit Sharpening Tool

- **Ice Carver Pick**
- **Miter Saw**
- **Four-Wheel Steer Cart**
- **Two-Wheel Dolly**
- **Lifts**

4.57 Miter Saw

A gouge is one type of chisel serves to carve small pieces from the material, particularly in woodworking, woodturning, and ice sculpturing. Gouges most frequently produce curved in surfaces. A gouge typically has a 'U'-shaped cross-section in it.

4.5.2 Butter Carving

Butter carving is an art which represents nature at its best. It reflects the lifestyle of people and animals. They are popular in United States and are used as culinary decorations at buffet tables. It was originated in ancient time Tibet, Babylon, Roman and Britain. The first masterpiece was from Europe in the year 1536. The first display was created by Caroline Shawk Brooks, a farmer from Helena, Arkansas.
