

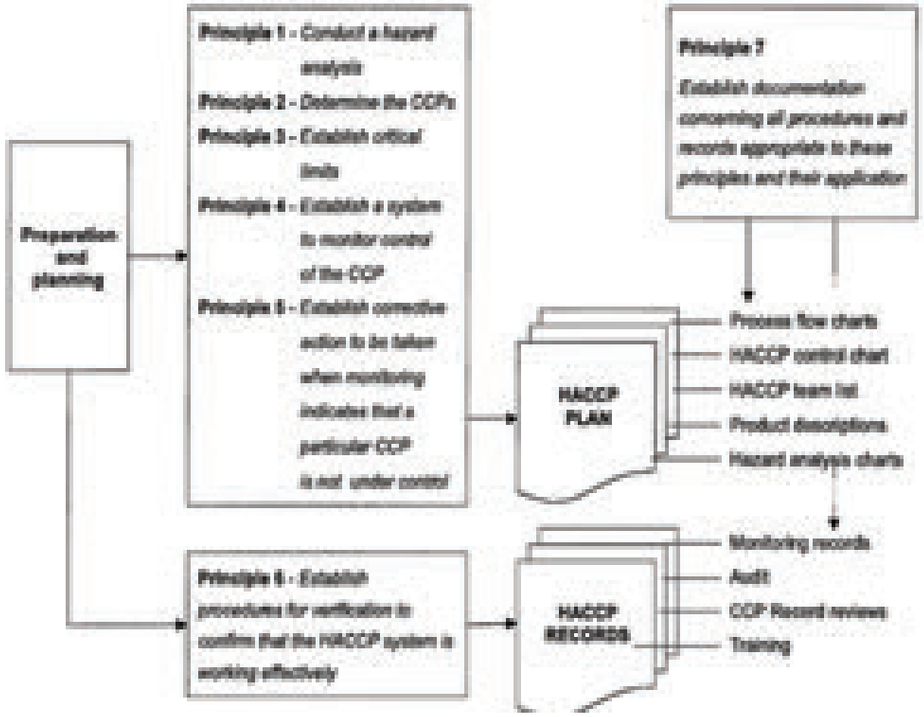

Figure 5.9 HACCP Principles

that the process is under control at each Critical Control Point. Each monitoring procedure and its frequency should be listed in the organization's HACCP plan.

Establish corrective action

The organization's HACCP plan is needed to identify the corrective action to be taken if a critical limit is not met. Corrective action are intended to ensure that no product is injurious to health when it enters the market.

Establish procedures for ensuring the HACCP system is working as intended

Validation ensures that there is production of a safe product scientifically. Verification ensures the HACCP plan is working as intended. Verification procedures also include a review of HACCP plans, CCP records, critical limits and microbial sampling and analysis.

DO YOU KNOW?

Validation – It is the action of checking or proving the validity or accuracy of something, that can be legally or officially acceptable.

Establish record keeping procedures

The HACCP regulation requires that all organizations to maintain certain documents, such as hazard analysis and written HACCP plan, and records documenting the monitoring of Critical Control Points, critical limits, verification activities, and the handling of processing deviations. Implementation involves monitoring, verifying, and validating of the daily work that is compliant with regulatory requirements in all stages.
