How to establish HACCP?

- Choose a specific menu or group of items in a menu
- Draw up a flow diagram showing how the items are made
- Select the most relevant person who should
  - a) Modify the flow diagram if necessary
  - b) Inspect each stage and clearly find out where significant hazards could occur both under normal and occasional conditions
  - c) Make a note of all predictable causes of each hazard
  - d) Point out each CCP and how they can be controlled
- State the control procedures at each CCP and change working practices as necessary.

How to maintain HACCP?

- Monitor the information (E.g.. Record temperature and maintain a chart) and take effective action when needed.
- Alter the HACCP system as necessary in the processes.
- Periodic checks should be carried out to ensure all instruments are safe.
- Periodic microbiological testing should be done in the lab of raw materials, equipment and product.
- Ensure adequate personnel monitoring, training and retraining.

Use of HACCP in food service operations

The most common aspects to be considered are:

- Handling and storage procedures from delivery to service of the menu items
- Handling items and temperatures
- Cooking time and
- Personnel training
