together till the mixture comes to a very light and fluffy condition. Sugar, milk or any other liquids, colour and essence are mixed together added into the previous mixture. Eggs are added and the whole mass is mixed to a smooth batter. This method is suitable for high ratio cakes. High ratio cake means the quantity of sugar is more than the quantity of flour. Sometimes special cake flour and butter are used for such cakes.

4. Boiled method

Plate 4.14 **Boiled Method**

In the boiled method, butter or fat is heated with water till the boiling point is reached. After heating remove from the fire and add 2/3 of flour and mix it thoroughly. And beat the eggs and sugar until it becomes stiff and add colour and essence. Then this mixture is added into the previous mixture gradually. It is mixed thoroughly and the remaining flour can be added at this stage. This is used for making Madeira and Genoese sponge cakes.

5. All-in-process Method

In all- in-process method, all the ingredients are mixed together in the mixing bowl. Aeration of the mixture is achieved by controlling the speed of the mixture as well as the mixing time. Wire whip is used for this method because it ensures a faster breakdown of ingredients and it helps to achieve good aeration.

After adding all the ingredients, mixing operation is conducted as follows:

- **Slow Speed:** In this speed, all the dry ingredients are moistened without flying off from the bowl.
- **Fast speed (two minutes):** Here the mixture gets even air incorporation.
- **Slow speed (one minute):** This is done in order to eliminate any possible large air pockets and still finer breaking down of air cells.

DO YOU KNOW?

The **all- in-process method** is mainly used for gel sponge. If the formula contains oil, it should be added in the last stage.

Use emulsified type of shortening agents and cake flour for better cakes in all- in-process method.

6. Foaming method or Sponge method

In the foaming method, beat the eggs till it becomes fluffy and frothy. During beating, the small air cells are incorporated into the mixture. This air incorporation helps to increase the volume. Then add sugar gradually in continuous beating till it becomes thick and creamy. The essence and colour can be added at this stage. The flour should be sifted with baking powder and added with just necessary movements of hand without disturbing the foam. If it is rough folding
