or uneven mixing, the incorporated air will evaporate. Then the finished product will be of very poor quality and flat one. So this folding stage is very important for baking.

7. Sugar water method

In sugar water method, all the sugar and half the quantity of water are agitated in a bowl till the sugar is dissolved completely. Then the remaining ingredients except egg are added and the mixture is well agitated to achieve aeration. Lastly, egg is added and the mixture is cleared. Due to more aeration and better emulsification, the cakes produced in this method have better texture and longer shelf life.

4.1.5 Characteristics/Quality of cake or scoring of cake

Following characteristics are considered for scoring a cake

1. External characteristics namely i) Volume (ii) Colour of the crust (iii) Symmetry of form (iv) Crust character and (v) Bloom.
2. Internal characteristics such as i) Grain ii) Crumb colour iii) Aroma iv) Taste v) Texture and vi) Shelf life.

I. External characteristics

i) Volume

Cake volume depends on the types of cake and weight of batter. A well-risen cake will have a pleasing appearance with slight convex top surface. A cake should not appear too small or too large for its weight. For example, a cake should be of medium volume so that its interior wall has good appearance and construction.

Plate 4.15 **Cake Volume**

ii) Colour of crust

Colour of the crust differs in different types of cakes. So no one term is applicable to all kind of colour. There should be harmony between cake colour and crust colour. The crust should have a pleasing golden brown colour. Too dark or too light or dull colour is not desirable. Crust must have a uniform colour, free foam dark streaks or sugar spots or grease spots.

Plate 4.16 **Crust Colour**

iii) Appearance

Cake should have a symmetrical appearance. Peaking, crack in top surface, low sides. Sunken or high center, burst,
