Drawing Spirals

There are two types of spirals. They are

1. Symmetrical spiral
2. Logarithmic spiral.

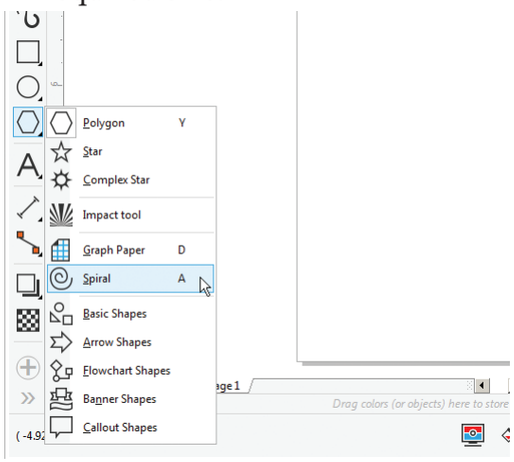

A Symmetrical spiral expands evenly so that the distance between each revolution is equal. A Logarithmic spiral expands with increasingly larger distances between revolutions.

You can draw spirals of different sizes with Spiral tool.

To draw a spiral,

1. Click and hold the **Polygon tool**. A flyout menu will appear.
2. Click on the **Spiral tool** from the flyout menu.
3. Now you should type a value in the Spiral revolutions box on the property bar to set the number of full-circle revolutions to appear in the new spiral object.
4. Next, click one of the following buttons on the property bar:
   - Symmetrical spiral
   - Logarithmic spiral

   If you want to change the amount by which the spiral expands as it moves outward, move the Spiral expansion slide.
5. Drag diagonally in the drawing window until the spiral is the required size.
