Between any two nodes in a curve or line object is a "Segment". There are two types of segments : Curves and lines.

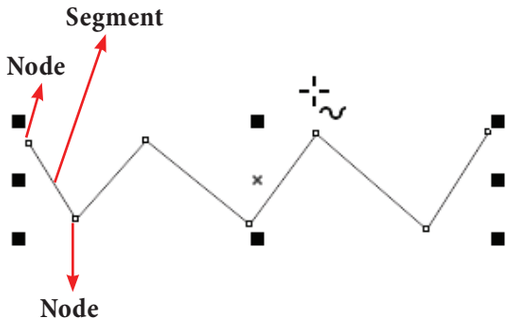

Fig. 3.31 Segments

Adding arrowheads to lines

To add arrowhead to a line

1. Using the Freehand tool draw a line.
2. Select the line.
3. Click the drop-down button on the End Arrowhead Selector on the Property tool bar.
4. Then click the desired arrow tip. Now the line appears with an arrow.

You can set the line style, width, and the colour of the line using the Properties bar.

3. Using the Color Palette

The Color Palette is a characteristic component of CorelDRAW. It can be used docked or undocked.

Viewing Palette Colors

- The tiny squares of colour you see in this palette are referred to as **wells**.
- To scroll the Color Palette color well collection, click the **Up or Down arrow buttons** at the top and bottom of the palette.
- Single clicks using your **left mouse button** on these arrow buttons enables you to scroll the section, one colour well at a time.
- Single clicks with your **right mouse button** produce a Page Up and Page Down effect, scrolling the visible color selection a complete row up or down.
- You can rearrange the order of any collection of colours in the Color Palette by **click-dragging up or down** on any colour well.
- Scrolling provides a way for you to gain access to a limited selection of visible colors. But, when this isn't convenient, you can view the full collection temporarily by clicking the **Expand button**.
- After making your colour selection, Color Palette automatically returns to its original state.
- While the Color Palette is floating, **click-drag** its **title bar** to move it around the window or click the **Close button** to hide it from view.
- Choose **Window > Color Palettes** and select a palette to display any palette in its last used state.
