Deselecting a single object in a group

To deselect a single object among multiple selected objects, hold down **Shift key** and click the object.

Moving Objects

You can move objects by dragging them with the mouse, by nudging them with the arrow keys on your keyboard.

Moving objects using mouse.

To move an object using the mouse

1. Select the object using the Pick tool.
2. Depress the mouse while pointing to a spot on the object's outline, or within a filled area of an object. A dotted highlighting box appears.
3. Drag it to the desired location.
4. Release the mouse when the object is positioned correctly.

Moving objects in increments by nudging

The cursor keys on your keyboard allow you to move or nudge selected objects in the direction indicated by the arrow on the key.

Nudge : The act of moving a selection incrementally using the keyboard arrow keys.

Copying Objects

Objects can be copied using the **Duplicate** and **Clone** commands in the Edit menu. You can also use the Windows Clipboard.

Copying

CorelDraw provides several ways to create copies of selected objects.

1. **Using the Right click**

   Click your right mouse button while transforming, rotating, or moving an object with the Pick tool to create a copy on the fly. The object currently being dragged becomes the copy, leaving the original object unchanged. The small + symbol beside the cursor indicates that a copy has been created.

Note : Using the right-click technique to copy an object as you transform it applies only while using the Pick tool.

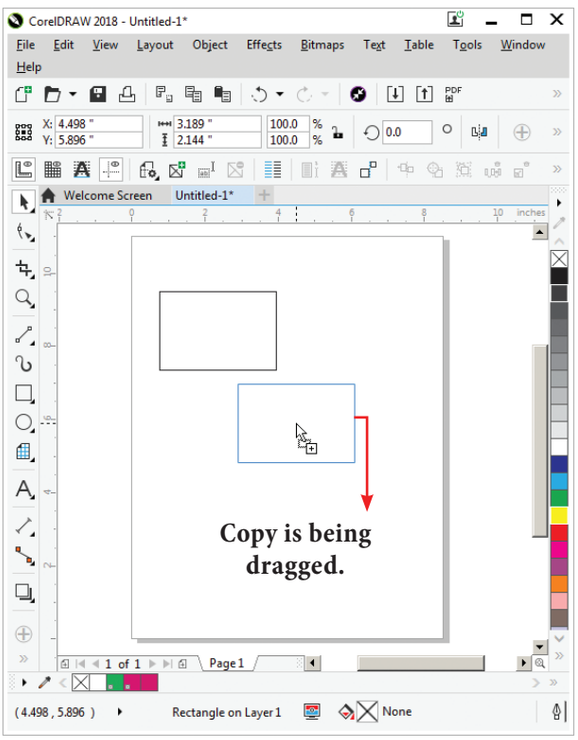

Fig. 3.53 Copying an Object Using the Right click

2. **Using the SPACEBAR**

   Press the SPACEBAR while transforming, rotating, or moving an object with the Pick tool to create a copy. Doing this causes a copy to be created in situ, meaning a copy is 'dropped' each time the SPACEBAR is pressed.
