Ungrouping

Ungrouping a group breaks the relationship among the objects.

To ungroup a group object

1. Select the grouped object using the Pick tool.
2. Choose **Object > Group > Ungroup** Objects on the menu Bar. (or) Press **Ctrl + U** in the key board (or) Click on the Ungroup Objects button on the Property Bar.

   The grouped object will break into its component objects.

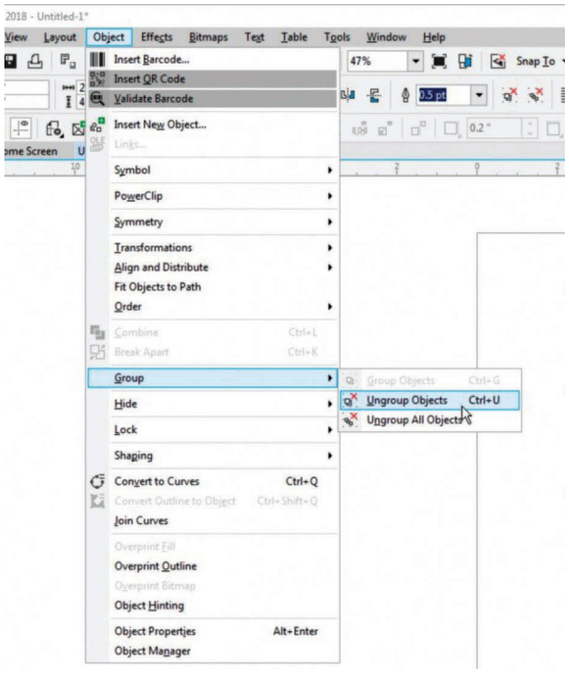

Fig. 3.59 Ungrouping objects

Since any selection of objects can be grouped, you can easily make groups of groups. Groups within groups are called "nested" groups.

To ungroup a nested groups

1. Select the nested groups using the Pick tool.
2. Choose **Object > Group > Ungroup** All Objects on the menu Bar. (or) Click on the Ungroup All Objects button on the Property Bar.

Tips

Ungroup Objects - breaks a group into individual objects, or a nested group into multiple groups.

Ungroup All objects - breaks a group into individual objects, including objects within nested groups.

Combining Objects

You can combine two or more objects using Combine command.

Combine command combines two or more objects and creates a single object with common fill and outline attributes.

Combining objects is different from grouping them. Combining objects actually transforms the objects that are combined. Combined objects can be broken apart. However, the objects do not revert to their original shape and fill but retain changes made when they were combined.

To Combine objects:

1. Select the objects with the **Pick tool**. (To select multiple objects hold down **Shift key** while selecting them.)
2. Choose **Object > Combine** (or) Press **Ctrl + L**. The selected objects will be grouped as a single object.
