Welding objects

By welding you can create irregular shapes. The welded objects take on the outline and fill of the object that was selected last. Welded objects can revert to their original individual objects only by using the Undo button.

To weld objects using Property Bar

1. Select the objects with the Pick tool by holding the **Shift** key.
2. Choose **Object > Shaping > Weld** in the menu bar (or) Click on **Weld button** on the Property bar.
3. The objects will be welded and will become a single outline object.

If the marquee selected the objects when welding using the Property Bar, the welded object assumes the outline and the fill properties of the bottom-most selected object. If you use multiple selection, the welded object takes on the properties of the object you selected last.

11. Working with Text

CorelDRAW defines text in two ways : **Artistic text** and **Paragraph text**. You can enter text directly on the document page or through a text box. Paragraph text is better suited for long blocks of text whereas Artistic text offers you more freedom to assign artistic effects to letters.

Adding Artistic text

Artistic Text is used to create short pieces of text anywhere on the page. You can apply special effects and transformations to that text. If you are creating special effects with the text (for example, fitting it to a path, or blending and extruding it), you must enter it as Artistic text.

To add the Artistic text

1. Click the Text tool. The mouse pointer changes to a crosshair with a small 'A' beneath it.
