Fitting text to a path

CorelDRAW allows you fit a string of text to any path - a straight or curved line, a rectangle, an ellipse, or another letter or text string. To fit text to a path, use the **Fit Text to Path** command in the **Text** menu. It becomes available only when you select both a text object and a non-text object at the same time.

A text string can be fitted to the "path" traced by the second object's outline, as shown in the following examples:

To fit text to a path:

1. Select the text object and the second object using the Pick tool and the **Shift** key.
2. Choose **Fit Text To Path** from the Text menu.
3. The text is redrawn along the path of the second object.

You can remove the path object with the Delete command when the text is positioned correctly.

To remove the path object

1. Select the Shape tool and click on the path object.
2. Then Select the Pick tool and click on the path object.
3. Now press the **Delete** key. The path object is deleted.

Tips

To fit text to another letter, you must first convert the target letter to a curve object, using the **Covert to Curves** command in the **Object** menu.

Entering Text Directly onto a Path

Text can be entered directly onto most paths - curves, rectangles, ellipses, shapes, and stars.

To enter text directly onto a path

1. Using the Pick tool, select the path.
2. Choose **Text > Fit** text to path in the menu bar.
3. Move the text cursor over the outline of the target shape. The pointer changes to the Fit text to path pointer.
