and edit objects in the pasteboard also but they will not be visible in the final movie. Only the graphical objects kept inside the stage are visible in the final movie.

The Stage reflects the actual size of the movie you create in Flash when it is published.

5.6.3 The Timeline

The timeline is one of the most important components of Flash. It is located below the Stage. It is used to specify of each element's appearance and animation.

The Timeline also contains Frames and Layers. Flash movies measure time in frames. Frames are the discrete, small slices of time. You can change the content on the Flash Stage for different frames.

A red vertical line in the Timeline is called the Playhead. When the movie plays, the playhead moves through the frames in the Timeline.

To display a frame's content on the Stage, you should move the playhead to that frame in the Timeline.

Layers help you organize the artwork in your movie. Each layer can contain a different image that appears on the Flash Stage. You can draw and edit objects on one layer without affecting objects on another layer of Timeline. You can hide, lock, or show the contents of layers by clicking the dots in the layer under the layer option icons.

Timeline is the record of every frame, layer and scene that makes up a movie. It controls and organizes the movie's content over time using layers and frames.
