6.6 Working in the Command-Line Interface

The command-line interface is docked by default along the bottom edge of the drawing area. It serves as your primary method of interacting with AutoCAD. You use this interface to tell the software what you would like it to do for you. The AutoCAD software uses this interface to communicate the information it needs from you.

6.7 Starting a new AutoCAD drawing

6.7.1 Drawing with the line tool

1. Click the New button in the Quick Access toolbar.

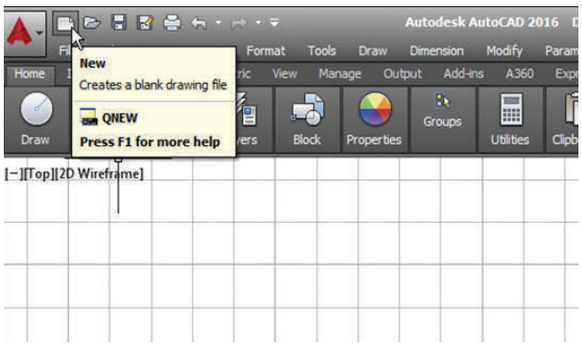

Fig. 6.50. The New button in the Quick Access toolbar

AutoCAD displays the Select Template dialog box.

2. Select a template file **acad.dwt**, and then click Open.
