Draw a line of length 5 units whose start point is at 1,1 and inclined at an angle of 30 degrees to the X axis using Relative Polar Coordinates.

Command: LINE ↵

Specify first point: 1,1 ↵

Specify next point or [Undo]: @5<30 ↵

Specify next point or [Undo]: ↵(Press ENTER to complete the drawing)

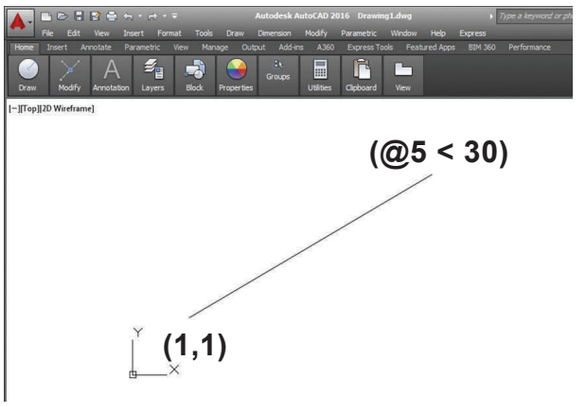

Fig. 6.65. Drawing a line by using Relative Polar Coordinates

Note : By default, in the relative polar coordinate system, the angle is measured from the horizontal axis as the zero degree. Also, the angle is positive if measured in counter clockwise direction and is negative if measured in clockwise direction.

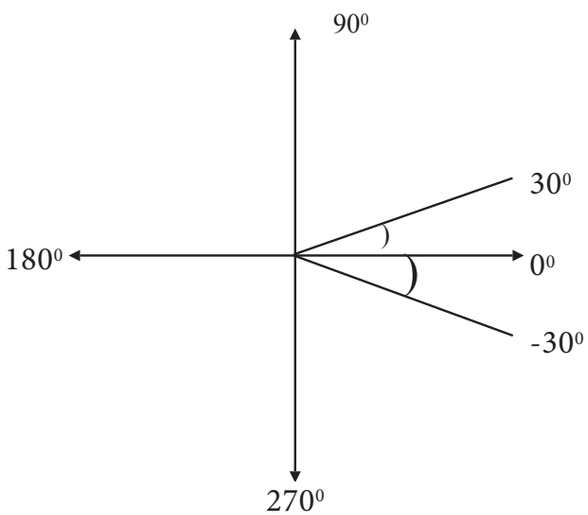

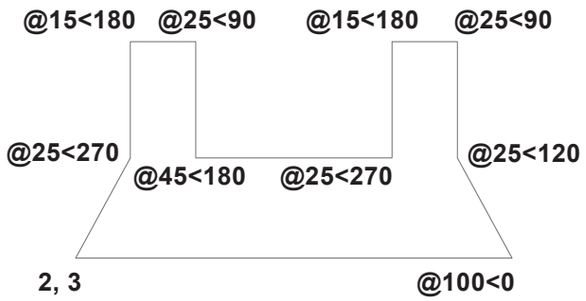

Fig. 6.66. Polar Coordinates

Draw a figure using Relative Polar Co ordinates. The coordinates of the points are given in the table below.

Point	Coordinates
1	2,3
2	@100<0
3	@25<120
4	@25<90
5	@15<180
6	@25<270
7	@45<180
8	@25<90
9	@15<180
10	@25<270

1. Start a new file with **acad.dwt** template in the **Drafting & Annotation** workspace.
2. Type **LINE** in the Command Line.
   The prompt sequence is given below.
   Command: LINE ↵
   Specify first point: 2,3 ↵
   Specify next point or [Undo]: @100<0 ↵
   Specify next point or [Undo]: @25<120 ↵
   Specify next point or [Close/Undo]: @25<90 ↵
   Specify next point or [Close/Undo]: @15<180 ↵
   Specify next point or [Close/Undo]: @25<270 ↵
   Specify next point or [Close/Undo]: @45<180 ↵
