6.7.4 Drawing a Rectangle

One of the most basic shapes used by drafters and designers is the rectangle. You can create a rectangle using the LINE command, but doing so has some disadvantages. For example, you would have to take the time to make sure that the corner angles are exactly 90°. Also, each line segment would be a separate object. Therefore, AutoCAD 2016 provides the RECTANG command, which allows you to create a rectangle with perfect corners and as a single object. Clicking anywhere on a rectangle created with the RECTANG command selects the entire rectangle.

To draw a Rectangle using the cursor to select the corners :

1. Command : RECTANGLE (or) REC (Press Enter Key)
2. The following will appear on the command line:

   RECTANGLE

   Specify first corner point or [Chamfer/Elevation/Fillet/Thickness/Width]:

   Specify the location of the first corner by moving the cursor to a location (P1) and then press the left mouse button.
3. The following will appear on the command line:

   Specify other corner point or [Area / Dimensions / Rotation]:

   Specify the location of the diagonal corner (P2) by moving the cursor diagonally away from the first corner (P1) and pressing the left mouse button.

   Now a rectangle will appear.

Draw a rectangle defined by diagonal points (20,30) and (150, 160).

Command: RECTANGLE ↵

Specify first corner point or [Chamfer/Elevation/Fillet/Thickness/Width]: 20,30 ↵

Specify other corner point or [Area/Dimensions/Rotation]: 150,160 ↵
