directly to buyers. Kurien began working closely with the cooperative, and helped use modern technology to process and store dairy products as well as market them effectively. The approach was spectacularly successful: from its initial capacity of 250 litres of milk a day, the cooperative in 2000 handled a million litres. Renamed Amul, it is one of India’s largest food producers today. Kurien was subsequently appointed the head of a new National Dairy Development Board. In this role, he started a programme called Operation Flood, which was intended to replicate the Anand model across India. Thanks to Kurien’s efforts and those of the millions involved in dairy farming, India is today the largest milk producer in the world.
