> *of their religion,* the people are totally misled as to the system and phenomena of nature; and their errors in this branch of science, upon which divers important conclusions rest, may be more easily demonstrated to them, than the absurdity and falsehood of their mythological legends. From the demonstration of the true cause of eclipses, the story of Ragoo and Ketoo, the dragons, who when the sun and moon are obscured are supposed to be assaulting them, a story which has hitherto been an article of religious faith, productive of religious services among the Hindoos, would fall to the ground; the removal of one pillar would weaken the fabric of falsehood; the discovery of one palpable error, would open the mind to farther conviction; and the progressive discovery of truths, hitherto unknown, would dissipate as many superstitious chimeras, the parents of false fears, and false hopes. Every branch of natural philosophy might in time be introduced and diffused among the Hindoos. Their understandings would then be strengthened, as well as their minds informed, and error be dispelled in proportion* [emphases added].

On the introduction of Christianity, Grant had the following to say:

> It is not asserted, that such effects would be immediate or universal; but admitting them to be progressive, and partial only, yet how great would the change be, and how happy at length for the outward prosperity, and internal peace of society among the Hindoos! Men would be restored to the use of their reason; all the advantages of happy soil, climate, and situation, would be observed and improved; the comforts and conveniences of life would be increased; the cultivation of the mind, and rational intercourse, valued; the people would rise in the scale of human beings; and as they found their character, their state, and their comforts, improved, they would prize more highly, the security and the happiness of a well-ordered society. Such a change would correct those sad disorders which have been described, and for which no other remedy has been proposed, nor is in the nature of things to be found.

Grant’s views are the perfect response to those that contend that language is merely a medium of instruction or communication and that it must not be
