same standards of science and reason to the European coloniser's religion and its scripture. After all, if Indic OET is the subject of examination and criticism, it must be compared with Christian OET and the latter's claims of being the exclusive repository of reason and rationality. Also, when questioning the practical value of native learning and using the market as a test of its utility, the Christian coloniser turned a blind eye to the fact that knowledge of native OET was rendered unmarketable as a consequence of the alteration in the native worldview and way of life caused by the very factum of colonisation. Instead, he conveniently concludes that such learning had always been futile since it lacked intrinsic value. In any case, the Christian coloniser never deemed it fit to ask as to what was the market utility of being trained in Christian scripture. On the contrary, the British establishment was happy to financially support the Christian establishment in Bharat, which included pensionary benefits, using revenues earned from Bharat.

Between the Orientalist and Evangelical positions, William Bentinck threw his unreserved weight behind the latter, which is evidenced as follows:

> give my entire concurrence to the sentiments expressed in this Minute.
>
> W.C. BENTINCK

This reference is to Macaulay's Minute. Bentinck's concurrence was further reflected in the Resolution dated 7 March 1835, which is reproduced below[38]:

> On the 7th of March 1835 the following Resolution was issued:—
>
> 'The Governor-General of India in Council has attentively considered the two letters from the Secretary to the Committee of Public Instruction, dated the 21st and 22nd January last, and the papers referred to in them.
>
> First—His Lordship in Council is of opinion that the great object of the British Government ought to be the promotion of European literature and science among the natives of India; and that all the funds appropriated for the purpose of education would be best employed on English education alone.
